

**Shortwave Cloud Radiative Effects and Parasol Reflectance
for a given non-overlapped low-level cloud cover (Nam et al., CRL 2012)**

The plots show the shortwave cloud radiative effects and Parasol reflectance for a given non-overlapped low-level cloud cover in tropical subsidence zones; more specifically, when $\omega_{500\text{hPa}}$ and $\omega_{700\text{hPa}}$ is greater than 10 hPa day^{-1} and high- and mid-level cloud cover is less than 5%.
